

Monthly Product Release Briefing

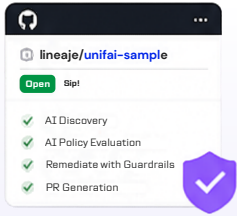

Release: April 2026

April's product updates for customers and partners

Secure AI.
Continuously.
With AI.

UnifAI

1 AI Security for Source Repositories and Pull Requests.

- Discovers AI assets in source repositories and pull requests, then evaluates them against security and governance policies.
- Supports GitHub, GitLab, and Bitbucket workflows.
- Enables script-based scan triggers directly from source control workflows.
- Adds automated remediation pull requests with built-in guardrails.

Why it Matters

Shift security left in the SDLC and ensure AI applications comply with your policies, industry standards and threats from the very first commit.

2 Hybrid Deployment for Sensitive Environments.

Supports deployment of the UnifAI scanner with the MCP server inside the customer environment, enabling full scans without code or metadata leaving their boundary.

Why it Matters

Keep your code and metadata within your boundary while benefiting from enterprise-grade AI security.

3 Factory AI IDE Integration.

Integrates with Droid CLI from Factory.ai so developers building agents and AI applications in Factory can apply Lineaje security controls directly in their workflow.

Why it Matters

Build AI applications faster with security guardrails embedded in your development workflow.

SBOM360

1 On-Premises Deployment for Air-Gapped Environments.

Lineaje Secure Software can now be deployed fully on-premises in air-gapped environments with no outbound connectivity, bundled with a fully operational vulnerability and open-source intelligence database (GLOSI).

Why it Matters

Achieve complete visibility and security even in the most restricted, air-gapped environments.

SBOM HUB

1 Expanded BOM Coverage with CBOM and HBOM

Lineaje SBOM360 and SBOM HUB now support generating and publishing Cryptography Bills of Materials (CBOMs) and Hardware Bills of Materials (HBOMs), expanding coverage beyond traditional software components. Address Post Quantum Cryptography (PQC) requirements

Why it Matters

Gain complete inventory visibility across software, cryptography, and hardware components. Address the PQC requirements.
